

Industry-First ATM Signage Recycling Program Launched

Companion Systems Announces New Service to Further Enhance Environmental Improvement Programs

February 27, 2008, SALT LAKE CITY, UT – Companion Systems Design and Manufacturing today announced an industry-first, comprehensive recycling program for ATM signage. This new service by Companion Systems will allow financial institutions the opportunity to recycle all of their obsolete ATM signage and further their own environmental improvement programs in the process.

As the leading provider of branded ATM surround, kiosk, and signage solutions for the financial services industry, Companion Systems is well equipped to remove and recycle all ATM environment signage regardless of the materials used in the signage.

“We are very pleased to offer this new service and to be able to help financial institutions further reduce their impact on the environment,” says Al Tiley, President of Companion Systems. “Our extensive experience with metal, fiberglass, plastics, and wood has helped us cultivate the knowledge and expertise necessary to effectively recycle ATM environment products made of any material.”

All ATM owners can take advantage of this new service whether their ATM surrounds and enclosures were produced by Companion Systems or another sign vendor. As branding surrounding an ATM is updated, ATM owners now have an environmentally friendly way to dispose of their outdated signage.

“For the last 10 years, we have been making great strides in reducing the impact of our manufacturing production on the environment. From eliminating harmful elements and reducing emissions to streamlining processes and minimizing waste, we are focused on continually finding ways to reduce our impact on the environment,” adds John Hansen, chief operating officer of Companion Systems.

While the initial stages of this new recycling program cover both the US and Canada, Companion Systems is exploring ways in which they can extend this program to other locations around the world.

“We are always looking for ways to further support our customers in their improvement efforts,” states Tiley. “Whether those efforts focus on improved branding, streamlined ordering, or environmental impact, we want to continue to be a leader for those solutions.”

About Companion Systems
