

The Best ATM Kiosks Around

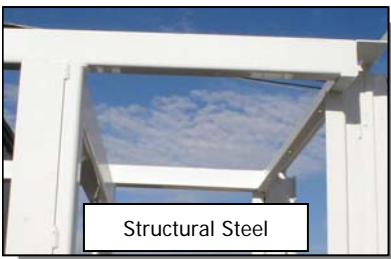

Building the best for over 25 years

Companion Systems ATM kiosks are the most attractive, functional, and durable kiosks available.

From our patented Straight-Line Suspension (SLS) system and pre-treated and powder coated steel frame to our non-corrosive, fiberglass body and molded-in colors and textures, our ATM kiosks are simply the finest designed and built ATM kiosks in the industry.

Kiosk with Canopy

Structural Steel

Strike Zones

Recessed Kiosk Base

- Eliminates damage by allowing bumpers to pass underneath
- Eliminates associated repair costs from bumper damage
- Smaller base allows for installation on smaller islands – potentially eliminating the costs of pouring a new island

Protective Strike Zones for Mirror Impact

- Made with the same armatuff material as used in truck beds
- Protects against impact, scratches, dents, mars, and corrosion
- Available for both the front and rear of the kiosk
- Easily replaceable to maintain 'new' appearance

Our attractive kiosk structures are a unique blend of both form and function.

Durable Fiberglass Body

- Curved designs for lasting appeal
- Molded-in color and texture
- Doesn't dent or chip like steel exteriors
- Reinforced 5/16" fiberglass
- Non-corrosive and never rusts

Patented Straight-Line Suspension

- Weight is transferred to pivot points on the structural frame above the ATM and inside the steel enclosure
- Eliminates the bending and sagging over time that is inherent with horizontal glide systems
- Can crank the ATM out for servicing just as easily after many years of operation as on the original day of installation
- Torque limiting device protects the system

Structural Steel Frame

- Sturdy 2" x 2" and 2" x 3" steel framing
- Extensive metal preparation includes pre-treatment wash to remove all contaminants
- Iron phosphate coating inhibits rust and ensures the best condition for paint adhesion
- Powder coated with an epoxy primer to eliminate rust and corrosion

The most frequent kiosk damage is caused by vehicle **bumpers** and **mirrors**. Our kiosks are designed and built specifically to protect ATMs from such damage.

Recessed ATM Panel

- Protects the ATM and bezel from vehicle damage
- Kiosk protective zones will take the hit, not the expensive ATM
- Replaceable ATM panel allows ATMs to be changed without the need for a new kiosk

Multiple Kiosks

In addition to protecting your ATM and kiosk against damage, we protect the interior of your kiosk from the water damage that is inherent in kiosks with seamed metal roofs. As the only kiosks in the industry with a one-piece, self contained, sealed roof and internal drainage system, our kiosks are also protected from unsightly streaking and will maintain their attractiveness for years to come.

One-piece, seamless roof

Sealed Roof with Internal Drainage System

- A unique-to-the-industry, one-piece, seamless fiberglass roof
- Eliminates leaks and unsightly streaking
- Concave design doesn't allow dirt or water over the edges, but instead funnels them to the internal drain
- Drain expels debris and water from the back base of the kiosk – keeping your exterior surface free from streaks
- Internal drain also keeps the water from freezing
- Exclusive roof and drain design is used in both canopy and non-canopy kiosks

Kiosk with Canopy

Attention Generating Canopy

- Includes backlit front sign with option for backlit signs on all other sides
- Available down-lighting increases customer convenience and safety
- Internal steel construction is prepared and treated just like the kiosk internal structure

Down-lighting

Secure Interior Storage

- 24 cubic feet of storage space for ATM supplies or additional security and communications equipment
- Plenty of space for servicing ATM from inside the secure kiosk
- Deadbolt locks are standard on both the approach and departure side doors

Ample Storage

More Standard Features

- Integrated envelope dispenser holds up to 350 envelopes
- Fits all drive-up ATMs from major ATM manufacturers
- Room for overhead or underground tube system to replenish cash
- Circulation fan runs 24/7 to create a balanced interior temperature and circulate air around the ATM
- Heating and A/C have separate thermostats for easy regulation
- Aluminum pan on the base also prevents rust and corrosion
- Withstands 120 mph wind shear
- Meets seismic zone 4 requirements for earthquakes
- **UL-listed shows quality of product and makes permitting easier**
- **Warranty for 7 years on the exterior and 2 years on the Straight-Line Suspension system**

Envelope Dispenser

Make the Most of Your Branding

- Our wide variety of drive-up kiosks provides large visible spaces to extend your branding opportunities
- Utilize the space like a billboard for your services
